Group A: Personal identifiers & representation

1. **Full real name:** Name humanizes the persona, improves stakeholder memory and empathy, and anchors a narrative. Names make personas easier to reference in conversations and scenarios.
2. **Pronouns:** Pronouns increase inclusivity and authenticity, it affects how designers write dialog and interactions.
3. **Preferred Name:** Introduces informal realism in dialogue scenarios, supports narrative consistency.
4. **Signature Quote:** Quotes derived from the person improves voice consistency.
5. **Image Style:** Casual imagery increases approachability and attention time, formal imagery improves credibility, it tells how the person sees themselves.
6. **Privacy Preference:** Representational opacity controls emotional engagement versus ethical exposure.

Full real name	Sim, M., Radka, B., Kohno, T., Roesner, F., & Hugenberg, K. (2025). Characterizing the Default Persona During Design: Mental Representations of Technology Users are Gendered. *The 2025 ACM Conference on Fairness, Accountability, and Transparency (FAccT '25)*.
Pronouns	Sim, M., Radka, B., Kohno, T., Roesner, F., & Hugenberg, K. (2025). Characterizing the Default Persona During Design: Mental Representations of Technology Users are Gendered. *The 2025 ACM Conference on Fairness, Accountability, and Transparency (FAccT '25)*.
Preferred Name	Deep, P., Bharadhidasan, M., & Kocaballi, A. B. (2025). "She was useful, but a bit too optimistic": Augmenting Design with Interactive Virtual Personas. *International Journal of Human-Computer Studies*.

Group B: Core demographics

1. **Age:** Age correlates with cognitive abilities, device ownership, digital skills and typical life goals.
2. **Gender identity:** Gender or self-identified gender influences social roles, communication styles, and design expectations.
3. **Ethnicity and cultural background:** Cultural background influences norms, communication styles, values and expectations.
4. **Nationality:** Nationality affects legal entitlements, available services, and regulatory contexts.
5. **Legal Status:** Legal status constrains access rights, ID verification requirements and privacy/consent flows.
6. **Political Orientation:** Political orientation predicts preferred sources and trust thresholds.

Age	Wybraniec, B. et al. (2024). Exploring the diversity of users of digital mobility services by developing personas. A case study of the Barcelona metropolitan area
Gender Identity	Sim, M. et al. (2025). Characterizing the Default Persona During Design: Mental Representations of Technology Users are Gendered

Nationality	Nielsen, L. et al. (2013). Going Global with Personas
Legal Status	Schreieck, M. et al. (2017). Governing nonprofit platform ecosystems an information platform for refugees
Political Orientation	An, J. et al. (2018). Imaginary People Representing Real Numbers: Generating Personas from Online Social Media Data

Group C: Language & communication attributes

1. **Primary language(s):** This determines UI language, microcopy, tone and localization needs and stability across scenarios.
2. **Communication style:** Knowing how the persona prefers to give/receive information: bullet points vs. narrative, short vs. detailed. Use to tailor content presentation.
3. **Tone preference:** Persona's tone (friendly, professional, playful) is stable and really affects dialog design and messages.
4. **Language register:** Preferred register (formal/informal) guides how the system addresses the user.
5. **Secondary working language:** Many users operate in a non-native working language and this affects vocabulary choice and comprehension of terminology.
6. **Media & channel preferences:** Which channels the persona normally uses (email, social, SMS, phone) critical for outreach and support routing.

Primary language(s)	Salminen, J., Şengün, H., Kwak, H., et al. (2018). From 2,772 segments to five personas: Summarizing a diverse online audience by generating culturally adapted personas.
Communication style	Deep, P., Bharadhidasan, M., & Kocaballi, A. B. (2025). "She was useful, but a bit too optimistic": Augmenting Design with Interactive Virtual Personas.
Tone preference	Deep, P., Bharadhidasan, M., & Kocaballi, A. B. (2025). "She was useful, but a bit too optimistic": Augmenting Design with Interactive Virtual Personas.
Language register	Deep, P., Bharadhidasan, M., & Kocaballi, A. B. (2025). "She was useful, but a bit too optimistic": Augmenting Design with Interactive Virtual Personas.
Secondary working language	Wybraniec, B. et al. (2024). Exploring the diversity of users of digital mobility services by developing personas – A case study of the Barcelona metropolitan area.
Media & channel preferences	An, J. et al. (2018). Imaginary People Representing Real Numbers: Generating Personas from Online Social Media Data.

Group D: Lifestyle, routines & time patterns

1. **Chronotype:** Shows whether the user is naturally a morning, evening, or intermediate type, which affects alertness and productivity.
2. **Peak Productivity Time:** Indicates when the user is most effective, helping schedule tasks and notifications realistically.
3. **Sleep Schedule:** Bedtime and wake-up patterns ensure the persona's daily routine feels natural.
4. **Energy Fluctuations:** Highlights times of high or low energy, guiding when to assign demanding vs. leisure activities.
5. **Preferred Meeting Time:** Suggests when the user is most receptive to interactions or collaboration.
6. **Primary Hobbies:** Core activities that motivate the user and define how they spend free time.
7. **Secondary Interests:** Less frequent activities that add depth and realism to the persona.
8. **Media Consumption:** Preferred channels and formats for content, guiding communication and engagement.
9. **Activity Preference:** Whether the user favors solo, group, online, or offline activities, shaping interaction design.
10. **Lifestyle Orientation:** Overall tendencies like tech-savvy, fitness-focused, or minimalist, influencing behavior patterns and product adoption.
11. **Time Spent on Hobbies:** How much time is devoted to leisure, helping estimate realistic product usage.

Chronotype	Deep, P., Bharadhidasan, M., & Kocaballi, A. B. (2025). "She was useful, but a bit too optimistic": Augmenting Design with Interactive Virtual Personas.
Peak Productivity Time	App Developers. How Do You Validate User Personas Through Data Analysis?

Primary Hobbies	Sim, M., Radka, B., Kohno, T., et al. (2025). Characterizing the Default Persona During Design: Mental Representations of Technology Users are Gendered. Preece, J., Sharp, H., & Rogers, Y. (2015). Interaction Design: Beyond Human-Computer Interaction.
Secondary Interests	Velasco, J. L., Teixeira, J. M., & Pinto, A. L. (2025). Validating personas for better communication: A structured model for low-resource contexts. Salminen, J., Guan, K., Jung, S., et al. (2021). A Survey of 15 Years of Data-Driven Persona Development.
Media Consumption	Salminen, J., Guan, K., Jung, S., et al. (2020). A Literature Review of Quantitative Persona Creation.
Activity Preference	Wybraniec, B., Roca, E., Ortego, M.I., & Lazzarini, B. (2024). Exploring the diversity of users of digital mobility services by developing personas.
Lifestyle Orientation	Sim, M., Radka, B., Kohno, T., et al. (2025). Characterizing the Default Persona During Design: Mental Representations of Technology Users are Gendered.
Time Spent on Hobbies	App Developers. How Do You Validate User Personas Through Data Analysis?

Group E: Education & academic profile

1. **Education Level:** Represents formal educational attainment (e.g., high school, undergraduate, graduate). Education level predicts comprehension, problem-solving capacity, familiarity with formal terminology, and learning curve in new systems or tools. Including average grades for each level provides additional granularity, reflecting mastery and depth of knowledge that can influence task performance and scenario realism.

2. **Field of Study:** Specifies the domain or discipline in which the persona received formal education (e.g., computer science, business, humanities). Field of study indicates domain expertise, technical vocabulary, and cognitive frameworks, which shape decision-making, communication preferences, and task execution strategies. This helps designers align system complexity and language to persona competence.

Education Level	Nielsen / Mulder templates
Field of Study	Harvard UX persona guide

Group F: Employment, career

1. **Current Job:** Specifies the persona's present occupation or role, providing context for daily tasks, domain knowledge, and stressors. Current employment defines the primary environment where digital systems and decision-making behaviors occur. It directly shapes motivation, time constraints, and technological expectations.

2. **Jobs Before This One:** Documents past roles and industries to show skill progression, adaptability, and exposure to various work cultures. Employment history enriches persona backstories, enabling better predictions of openness to innovation and change. It is also valuable for identifying latent expertise and transferable skills.

3. **Workplace Role Authority:** Represents hierarchical position and decision-making power (e.g., entry-level, manager, executive). Authority level influences persona priorities, communication tone, and tool adoption. Higher authority personas often exhibit more strategic goals, while lower-level roles reveal operational needs and constraints.

4. **Years of Work Experience:** Quantifies career maturity, which correlates with confidence, workflow stability, and preferred interaction patterns. Experience also predicts tolerance for automation and reliance on institutional knowledge useful in B2B and enterprise persona modeling.

5. **Industry Sector:** Identifies the professional domain (e.g., healthcare, finance, tech, education), influencing compliance constraints, terminology, and technological ecosystems. Industry context ensures persona alignment with sector-specific values and communication norms.

6. **Income Level:** Serves as an indicator of socioeconomic status, resource access, and purchasing power. Income correlates with digital access (device quality, connectivity), lifestyle, and brand expectations, adding realism and segmentation value to personas.

7. **Employment Status & Work Schedule:** Captures whether the persona is full-time, part-time, freelance, or unemployed, as well as typical working hours. This influences daily availability, cognitive load, and engagement windows. In scenario creation, it anchors personas in feasible temporal patterns.

Current Job	McGinn, J.J., & Kotamraju, N. (2008). *Data-driven persona development.* In *Proceedings of the SIGCHI Conference on Human Factors in Computing Systems* (pp. 1521–1524). Association for Computing Machinery.
Jobs Before This One	An, J., Kwak, H., Salminen, J., Jung, S., & Jansen, B. J. (2018). *Customer segmentation using online platforms: isolating behavioral and demographic segments for persona creation via aggregated user data. Social Network Analysis and Mining, 8*(1).

Workplace Role Authority	McGinn, J.J., & Kotamraju, N. (2008). *Data-driven persona development.* In *Proceedings of the SIGCHI Conference on Human Factors in Computing Systems* (pp. 1521–1524). Association for Computing Machinery.
Years of Work Experience	Miaskiewicz, T., & Kozar, K. A. (2011). *Personas and user-centered design: How can personas benefit product design processes? Design Studies, 32*(5), 417–430.
Industry Sector	LeRouge, C., Ma, J., Sneha, S., & Tolle, K. (2013). *User profiles and personas in the design and development of consumer health technologies. International Journal of Medical Informatics, 82*(11), e251–e268.
Income Level	Wybraniec, B., Roca, E., Ortego, M.I., & Lazzarini, B. (2024). *Exploring the diversity of users of digital mobility services by developing personas – A case study of the Barcelona metropolitan area. Travel Behaviour and Society, 36*, 100818.
Employment Status & Work Schedule	Pruitt, J., & Grudin, J. (2003). *Personas: Practice and theory.* In *Proceedings of the 2003 conference on Designing for user experiences* (pp. 1–15). Association for Computing Machinery.

Group G: Household, family & domestic context

1. **Relationship Status:** Defines the persona's social and emotional context (single, partnered, married, divorced, widowed). Relationship status influences decision-making autonomy, purchasing power, and communication tone in scenarios. Including this variable improves empathic accuracy and narrative realism in personas, especially for lifestyle, social, and caregiving applications.

2. **Household Composition:** Describes who lives with the persona. Family members, roommates, or living alone. This data affects time availability, shared resources, and technology usage patterns. In persona modeling, it helps simulate multi-user environments and shared decision contexts.

3. **Number and Age of Dependents:** Specifies dependent children, elderly parents, or others under the persona's care. Dependents add predictable time constraints and emotional priorities, influencing both short-term goals and long-term aspirations. This attribute provides critical grounding for personas in healthcare, education, and domestic technology sectors.

4. **Housing Type & Ownership:** Represents whether the persona rents or owns, and the type of dwelling (apartment, house, shared housing). Housing data indicates economic stability, geographic mobility, and technology infrastructure (e.g., broadband access). It's a stable identity trait relevant to design feasibility and financial behavior modeling.

5. **Home Environment:** Capturing qualitative aspects such as space, noise level, connectivity, and privacy are contextual variables that influence device use, task performance, and emotional wellbeing. Home environment data ensures persona narratives are grounded in realistic physical and social ecosystems.

Relationship Status	Sim, M., Radka, B., Kohno, T., Roesner, F., & Hugenberg, K. (2025). *Characterizing the Default Persona During Design: Mental Representations of Technology Users are Gendered.* In *The 2025 ACM Conference on Fairness, Accountability, and Transparency (FAccT '25)*, June 23–26, 2025, Athens, Greece. ACM, New York, NY, USA, 13 pages.

Home Environment	Jansen, B. J., Jung, S. G., Salminen, J., Guan, K. W., & Nielsen, L. (2021). *Strengths and weaknesses of persona creation methods: Guidelines and opportunities for digital innovations. Proceedings of the 54th Hawaii International Conference on System Sciences*, 10.

Group H: Financial & consumer behavior

1. **Financial Habits (Saver vs. Spender):** Represents the persona's approach to managing money. Whether conservative (saver) or impulsive (spender). This trait influences purchasing frequency, product selection, and sensitivity to pricing models or promotions. Financial behavior data enhances realism in personas for fintech, retail, and subscription-based services, aligning with behavioral economics models used in design personas.

2. **Long-Term Economic Goals:** Captures strategic aspirations such as saving for retirement, property acquisition, debt reduction, or investment diversification. Including long-term financial goals adds motivational depth and temporal stability to persona modeling. Reflecting enduring priorities that guide user choices across product categories and timeframes.

3. **Next Intended Purchase / Upcoming Financial Decision:** Identifies near-future intentions (e.g., planning to buy a car, upgrade a device, or enroll in insurance). This data provides actionable insight into user readiness and context of need, supporting anticipatory design and targeted personalization strategies.

Financial Habits (Saver vs. Spender)	Velasco, J. L., Teixeira, J. M., & Pinto, A. L. (2025). *Validating personas for better communication: A structured model for low-resource contexts. Iberoamerican Journal of Science Measurement and Communication, 5*(3), 1–12.
Long-Term Economic Goals	Pruitt, J., & Grudin, J. (2003). *Personas: Practice and theory.* In *Proceedings of the 2003 conference on Designing for user experiences* (pp. 1–15). Association for Computing Machinery.
Next Intended Purchase / Upcoming Financial Decision	Wybraniec, B., Roca, E., Ortego, M.I., & Lazzarini, B. (2024). *Exploring the diversity of users of digital mobility services by developing personas – A case study of the Barcelona metropolitan area. Travel Behaviour and Society, 36*, 100818.

Group I: Mobility

1. **Primary Mode of Transport:** Indicates the persona's dominant mobility method, reflecting autonomy, environmental values, socioeconomic background, and time constraints. Private vehicle users emphasize independence and speed; public transit users experience time-based constraints and social exposure; walkers and cyclists exhibit localized mobility and health orientation. Mode selection helps infer context of use (e.g., mobile device interfaces during commuting).

2. **Mobility Frequency & Purpose:** Defines the regularity and motivation behind movement patterns and daily commutes, caregiving duties, or leisure activities. Frequency reflects lifestyle stability and influences the persona's temporal context for technology interaction (e.g., short vs. long mobile sessions). Including purpose provides insight into emotional context (stressful commute vs. relaxing recreation), shaping scenario realism.

3. **Accessibility Considerations:** Highlights mobility enablers or constraints tied to physical, infrastructural, or policy conditions. Personas with limited mobility rely on accessible routes or adapted vehicles, while urban commuters consider parking or public infrastructure availability. These elements are essential for inclusive design and universal usability.

4. **Geographic Mobility Range:** Describes the persona's environmental scope and spatial routine, urban dwellers tend to exhibit high connectivity and service access, while rural personas face infrastructural and digital accessibility limitations. This factor determines design requirements for connectivity, interface robustness, and offline usability.

Primary Mode of Transport	Wybraniec, B., Roca, E., Ortego, M.I., & Lazzarini, B. (2024). *Exploring the diversity of users of digital mobility services by developing personas – A case study of the Barcelona metropolitan area. Travel Behaviour and Society, 36*, 100818.
Mobility Frequency & Purpose	Wybraniec, B., Roca, E., Ortego, M.I., & Lazzarini, B. (2024). *Exploring the diversity of users of digital mobility services by developing personas – A case study of the Barcelona metropolitan area. Travel Behaviour and Society, 36*, 100818.
Accessibility Considerations	Wybraniec, B., Roca, E., Ortego, M.I., & Lazzarini, B. (2024). *Exploring the diversity of users of digital mobility services by developing personas – A case study of the Barcelona metropolitan area. Travel Behaviour and Society, 36*, 100818.

Geographic Mobility Range	Wybraniec, B., Roca, E., Ortego, M.I., & Lazzarini, B. (2024). *Exploring the diversity of users of digital mobility services by developing personas – A case study of the Barcelona metropolitan area. Travel Behaviour and Society, 36*, 100818.

Group J: Health & accessibility

1. **Physical Health Status & Chronic Conditions:** Health status defines a persona's physical capability, energy levels, and potential limitations that affect digital interaction (e.g., attention span, endurance, or motor skills). Chronic conditions introduce stable context factors such as medication routines or ergonomic needs that shape when, where, and how users engage with technology. Including this data supports inclusive and empathic persona construction, particularly in healthcare, wellness, and accessibility-oriented systems.

2. **Disability & Accessibility Needs:** Represents sensory, cognitive, or motor impairments and the assistive strategies or technologies (e.g., screen readers, voice interfaces, adaptive keyboards) that compensate for them. These attributes directly influence interface layout, modality design, and task structure. Research shows that accessibility needs when embedded in persona profiles improve universal design adoption and anticipate exclusion risks across contexts.

Physical Health Status & Chronic Conditions	Holden, R. J., Kulanthaivel, A., Purkayastha, S., Goggins, K. M., & Kripalani, S. (2017). *Know thy eHealth user: Development of biopsychosocial personas from a study of older adults with heart failure. International Journal of Medical Informatics, 108*, 158–167.
Disability & Accessibility Needs	Office for Digital Accessibility. (n.d.). *Design Personas: Digital Accessibility Recommendations for Interactive Designs.* University IT, Stanford University.

Group K: Goals, priorities

1. **Short-to-Medium Term Priorities:** Represent concrete objectives that drive user behavior in the near term such as project completion, financial stability, or wellness targets. These priorities define the current motivational state of the persona, which shapes design decisions for relevance and immediacy.

2. **Long-Term Life Goals & Aspirations:** Capture enduring values, ambitions, and desired futures such as career advancement, family security, or self-actualization. These goals reflect intrinsic motivation, influence decision framing, and support empathic alignment in design scenarios. Including aspirational layers helps designers anticipate future system needs and emotional resonance, as demonstrated in empirical persona validation studies.

Short-to-Medium Term Priorities	Pruitt, J., & Grudin, J. (2003). *Personas: Practice and theory.* In *Proceedings of the 2003 Conference on Designing for User Experiences* (pp. 1–15). Association for Computing Machinery.
Long-Term Life Goals & Aspirations.	McGinn, J., & Kotamraju, N. (2008). *Data-driven persona development. Proceedings of the SIGCHI Conference on Human Factors in Computing Systems* (pp. 1521–1524). Association for Computing Machinery.

Group L: Digital identity, platform & trust posture

1. **Digital Device Ownership (types owned: smartphone, laptop, tablet):** Device ownership defines digital access, connectivity, and participation patterns. It indicates socioeconomic level, digital inclusion, and context of use, shaping design constraints for responsiveness and accessibility.

2. **Preferred / Primary Device:** Preferred devices reflect habitual contexts of interaction (e.g., mobile-first vs. desktop-first) and affect cognitive framing, attention span, and interface expectations.

3. **Platform / Operating System Ecosystem (iOS/Android/Windows/macOS):** Ecosystem choice reveals brand trust, data privacy orientation, and usability preferences. It also affects software compatibility and loyalty behaviors within a persona's digital ecosystem.

4. **Digital Literacy / Technical Proficiency:** Measures the persona's ability to understand, troubleshoot, and use digital tools. It influences trust calibration, system autonomy tolerance, and the level of user guidance needed in digital interactions.

5. **Security & Privacy Practices / Familiarity with Tools:** Captures behavioral trustworthiness and self-protection awareness users with strong privacy habits exhibit higher selective disclosure, while low-awareness personas require trust-enhancing cues in design.

6. **Trust Propensity (General Tendency to Trust Systems):** Represents the intrinsic psychological orientation toward trusting or distrusting digital systems and AI agents. Important for predicting engagement, compliance, and acceptance of automation.

7. **Frequency /Variety of Digital Activities Performed:** Quantifies the depth of digital engagement.

8. **Attitudes towards Technology (Affinity for Technology Interaction - ATI Score):** Measures the psychological orientation toward interacting with technology.

Digital Device Ownership	Wybraniec, B., Roca, E., Ortego, M. I., & Lazzarini, B. (2024). *Exploring the diversity of users of digital mobility services by developing personas – A case study of the Barcelona metropolitan area. Travel Behaviour and Society, 36*, 100818.

(2024). *Exploring the diversity of users of digital mobility services by developing personas – A case study of the Barcelona metropolitan area. Travel Behaviour and Society, 36*, 100818.

Group M: Skills

1. **Professional & Technical Skills:** Defines the persona's domain expertise and capabilities relevant to their occupation or role. Skills shape how effectively a persona can interact with digital systems, troubleshoot issues, and adopt new tools. In persona development, this information informs task complexity, training needs, and error-tolerance design.

2. **Soft Skills (Communication, Problem-Solving, Collaboration):** Describes interpersonal and cognitive competencies that affect how personas collaborate, make decisions, and engage with social or collaborative platforms. High soft-skill personas may prefer open communication systems, while low soft-skill personas may require guided interaction flows.

3. **Learning Agility & Skill Development Motivation:** Captures how quickly a persona adapts to new tools or workflows. It reflects openness to change critical for systems involving continuous updates or adaptive interfaces. Personas with high learning agility are more resilient to design change and innovation, a valuable predictor for adoption models.

4. **Certifications or Formal Credentials:** Concrete indicators of verified competence that lend structure and realism to persona construction. Certifications help contextualize the persona's level of responsibility, autonomy, and credibility within professional or regulated environments.

Professional & Technical Skills	Wybraniec, B., Roca, E., Ortego, M. I., & Lazzarini, B. (2024). *Exploring the diversity of users of digital mobility services by developing personas – A case study of the Barcelona metropolitan area. Travel Behaviour and Society, 36*, 100818.
